The gNarus Cargo Management Framework by GlobalTrak is the most complete, flexible, affordable supply chain management and cargo tracking information system

How it works

Place a GlobalTrak® asset monitoring unit with your intermodal shipment. The unit will communicate via satellite or cell the shipment location, condition, and security to a user-friendly, Web-accessible portal called the Information Management Bureau (IMB). Because GlobalTrak relies on publicly available global communications networks, no additional infrastructure is required.

- The IMB reports and sends alerts on shipment transit events, electronically attaches/publishes shipping documents, and can manage RFID-tagged inventory
- Electronic seals and sensors provide cargo security and total Chain-of-Custody
- It facilitates completion of Customs forms such as the ISF by providing a common platform for supply chain partners to list consolidators and show packing lists.
- The IMB can publish purchase orders, invoices, or any other documents between partners.
- The IMB operates as an On-Demand service, so requires no investment in cost or time for installation of software platforms for you or your suppliers.

gNarus Framework provides real-time supply chain visibility and security provide tangible business value and rapid ROI

- Merchandising
- Retail Store Management
- Security
- Trade Compliance
- Logistics
- Quality Control
- GLOBALTRAK Visibility & Security
- Inventory Control

GlobalTrak brings global cargo visibility information directly to your desktop 24/7

➢ Total Visibility: Real-time route information lets you see critical cargo and fleet status

➢ Exception Handling: Automated reports and alerts for exception conditions allow timely response to problems and corrective actions in real-time so problems are corrected quickly

➢ Damage & Spoilage: Cargo condition sensors tell you if the shipment will arrive ready to go on the shelves with required quality and can identify accountability for damage or spoilage en-route

➢ Enhanced Security: Electronic security seals and sensors tell you if and when tampering or theft occurs from origin to destination, 24/7. Chain-of-custody secures shipment and report unauthorized access

➢ Real-Time Inventory Management: Integrated RFID technology provides positive inventory control regardless of location in the global supply chain creating a "Virtual Warehouse" concept

The gNarus Framework Value Proposition:

➢ Direct Financial Benefits

✓ Reductions in finished good inventory due to reduced transit time

✓ Faster customer billing cycles and reduction of A/R aging due to real-time delivery confirmation

✓ Reduction in inventory carrying costs

✓ Reduction in shrinkage through damage or theft

✓ Reduction in container/trailer fleet size and loss

✓ Reduction in spoilage for cold chain and perishables

✓ Reduction in insurance premiums, deductibles, and value caps

✓ Reduction in safety stock requirement/out-of-stocks

✓ Increased manufacturing uptime to reduction of JIT variance of raw material and components

✓ Reduction customs clearance time

✓ Reduction of cargo inspection/examination fees

✓ Reduction in expedited shipping/exception handling costs

✓ Reduced transit time/cargo delays and demurrage costs

✓ Increase in automated handling and financial functions

✓ Fleet Tracking ROI factors - reduced mileage/fuel, driver overtime, improved safety, maintenance,

✓ Business process automation allow fewer staff to be focused on critical problems

✓ **Increase in top-line revenues and EBITDA**

➢ Other Benefits

✓ Improvement in product quality due to mishandling monitoring and accountability

✓ Convenient trade partners and supplier collaboration platform

✓ **Improved customer service and customer satisfaction**
